## Telme is a leader in communication “convergence”, namely, the melding of voice and media services, which is heralding a new era of inter-personal communications.

Telme is a leader in communication “convergence”, namely, the melding of voice and media services, which is heralding a new era of inter-personal communications.

Telme is a social network company the core of which is the global Telme Community. Telme relies on ultimate technologies, but it's a company of people, and for the people.

**The heart of Telme technology is the WOIP2 (World Over IP) platform, designed by a forward thinking group of Telme IT engineers.** The system they designed avoids the limitations inherent with conventional networks and bridge the technology gaps that serve the highest-growth sectors of telephony and Internet, including fixed-line, mobile, VoIP (Voice over Internet Protocol). It's patent pending “Woip2 architecture”, rich technological assets and unique methodology, all provide a wide-array of simple-to-use, services to a worldwide users base. Because of its approach and cutting-edge services offer, Telme is able to compete indirectly with the major national and global telecom and Internet operators with virtually no capital infrastructure being required.

Telme's flagship product is its application, called “**V-SIM**” (Virtual SIM). Designed all type of communication application, Telme's V-SIM card based services, provides cutting edge communication services in most of the countries and a wealth of features not offered by the traditional operators, such as Mobile Voip, for Voice and Video call over GPRS/EDGE/UMTS/Wi-Fi Networks, Broad Band Voip Service, Geographic Numbers (DID), TollFree numbers, Woip2 GSM Sim card (VSIM-NRG), and advanced seeking services. Variations of these services will compete in the offer of Telme to world wide markets and they promise to be revolutionary.

Telme's technical operations are based in the Republic of Singapore. It operates as a new generation of Inter-Operator, and has “POPs” (Points of Presence) located in the Singapore, Italy, Russia, France, Venezuela, Miami and Brasil, with more to be added. Its advanced network and facilities are not only fully scalable for growth, but they provide major carrier-class quality and reliability. Its V-SIM cards are amongst the most sophisticated in the world.

For Marketing and Sales, Telme has chosen to primarily distribute its products and services through the Network Marketing channels, which thus provides a conduit to their collective, large and established users base around the world. Accordingly, Telme's products are in the global marketplace only under Telme brand, Telme full-function branch offices are in Italy, Russia, Venezuela, Brasil.

Telme is managed by a seasoned group of professionals from a wide range of professional disciplines and they are dedicated to establishing Telme as one of the foremost companies in the international Internet and telecommunications sector. The WoIP2™ network is the world's first inter-operator network and is present in more than 60 countries. Wherever you are, WoIP2™ technology means that you are never alone; WoIP2™ accompanies you on any journey.

Whether you are in a crowded city centre, or on the world's highest peak, WoIP2™ will always be available to let you communicate freely or extremely cheaply with total independence from local operators.
